

## Lab 4: polymorphism in C++

TA: Mohammed Shehab

# What is Polymorphism?

<https://www.geeksforgeeks.org/polymorphism-in-c/>

- Def 1: means "many forms", and it occurs when we have many classes that are related to each other by inheritance [1].
- Def 2: means that a call to a member function will produce different tasks to be executed depending on the type of object that invokes the function [2].

# Base Class vs Derived Class
